1.Introduction

This user manual explains how to use the CyberAware web application. It describes how users can register, log in, browse cybersecurity learning modules, complete interactive scenarios, take quizzes, and view their learning progress.

1.1. Purpose of the application

CyberAware is an educational web application focused on safe internet use. Its purpose is to help everyday users recognize common online threats such as phishing, weak password habits, malware, ransomware, and online scams.

1.2. Target Users

The application is intended for non-technical users who want to learn basic cybersecurity principles in a simple and practical way. It is suitable for users who use the internet for communication, shopping, banking, studying, or work.

1.3. System Requirements

CyberAware runs in a modern web browser. The user needs an internet connection and a device such as a computer, tablet, or smartphone. For saved progress, the user needs to create an account and log in.

2.Getting Started

This section explains how to open the application and use basic account functions.

2.1. Opening the Application

When the page loads, the homepage is displayed. From the homepage, users can access learning modules, view progress information, or log in.

Figure 1: CyberAware homepage

2.2. Registering a New Account

To create an account, open the registration page and fill in the required information. After submitting the form, the account is created and can be used to save learning progress.

The registration form is titled "Create account" with a subtext "Save your learning progress across devices." It includes four input fields: "Display name" (containing "Adam"), "Email" (containing "you@example.com"), "Password" (containing "At least 6 characters" and a toggle icon), and "Confirm password" (containing "Repeat your password" and a toggle icon). A blue "Create account" button is at the bottom, followed by a link "Already have an account? Log in".

2.3. Logging In

To log in, open the login page and enter the registered email address and password. After successful login, the application recognizes the user and can save progress to the account.

Log in
Continue your cybersecurity learning.

2.4. Logging Out

To log out, click the logout option in the navigation menu. After logging out, the user can still browse public learning content, but saved progress is only available after logging in again.

3. Using the Application

This section explains the main learning flow of the CyberAware application.

3.1. Homepage

The homepage provides a quick overview of the application. It introduces the purpose of CyberAware, shows available modules, and displays progress information for logged-in users.

Figure 6: Homepage overview

3.2. Browsing Learning Modules

The modules page shows all available cybersecurity learning modules. Each module card includes the module title, short description, difficulty level, estimated completion time, and completion status.

COURSE CATALOGUE

Learning Modules

Choose a cybersecurity topic and learn through explanations, realistic examples, interactive scenarios, and quizzes.

Phishing & Fake Messages

Learn how attackers use fake emails, messages, and websites to steal sensitive information.

🕒 6 min 📖 Beginner

Score: 5 / 5

Completed

Passwords & Account Protection

Learn how to create strong passwords and protect your online accounts from unauthorized access.

🕒 5 min 📖 Beginner

Malware & Ransomware

Learn how harmful software can infect devices, steal data, or lock files for ransom.

🕒 6 min 📖 Beginner

Online Scams & Fraud

Recognize common online scams and learn how scammers manipulate people into sending money or sharing information.

🕒 7 min 📖 Beginner

3.4. Completed an Interactive Scenario

Interactive scenarios allow users to practice recognizing suspicious elements. The user clicks parts of the scenario and receives feedback explaining whether the selected element is suspicious or safe.

 Interactive scenario · Email message

Fake Bank Security Email

This scenario shows a suspicious email that pretends to come from a bank. The goal is to identify warning signs before clicking any link or sharing information.

 Click the parts of the email that look suspicious.

BANK LOGO

The email contains a bank logo at the top.

Figure 9: Interactive scenario example

3.5. Taking a Quiz

Each module includes a quiz. The quiz displays one question at a time. After selecting an answer, the application shows whether the answer is correct and provides a short explanation.

QUESTION 1 OF 5

**SCENARIO**

You receive an email that appears to be from your bank.

Subject: Urgent account verification required

The email says your account will be locked within 24 hours unless you click a link and confirm your login details.

What is the safest action?

Click the link and log in quickly

Reply to the email with your password

Visit the bank website directly or contact the bank through official channels

Forward the email to friends

Next Question

Figure 10: Quiz question

QUESTION 1 OF 5

SCENARIO

You receive an email that appears to be from your bank.

Subject: Urgent account verification required

The email says your account will be locked within 24 hours unless you click a link and confirm your login details.

What is the safest action?

Click the link and log in quickly

Reply to the email with your password

Visit the bank website directly or contact the bank through official channels

Forward the email to friends

Incorrect

The message uses urgency and asks the user to act through a link. The safest action is to avoid the link and verify the issue through official bank channels.

QUESTION 2 OF 5

Which of these is a common warning sign of phishing?

A message from a known friend saying hello

An urgent message asking for personal information ✓

A website you typed manually into the browser

A normal software update from your device settings

Correct

Phishing often uses urgent language and asks for sensitive information such as passwords, card numbers, or account details.

Next Question

Figure 12: Quiz question with correct answer and feedback

3.6. Viewing Quiz Results

After completing all quiz questions, the application displays the final score. Logged-in users have their result saved automatically to their account progress. You can get up to four different quiz result feedbacks based on the final score.

Figure 13: Quiz result screen

4. Progress Tracking

This section explains how users can view and manage their learning progress.

4.1. Opening the Progress Page

The progress page shows the user's saved learning results. This page is available only to logged-in users. If a logged-out user tries to open it, the application redirects them to the login page.

Figure 14: Progress page (Upper Part)

Figure 15: Progress page (Lower Part)

4.2. Understanding Completed Modules

Completed modules are shown on the progress page. A module is marked as completed after the user finishes their quiz and the result is saved.

Figure 16: Completed module progress

4.3. Understanding Scores and Average Score

The progress page displays quiz scores for completed modules. It also calculates the average score across completed modules, which is used for badge progress.

Figure 17: Quiz scores and average score

4.4. Understanding Badges

Badges are used as simple gamification elements. A badge can be locked, gold, or diamond depending on the amount of completed modules and their average quiz score.

Figure 18: Badge status

4.5. Resetting One Module

The user can reset progress for one selected module. This removes the saved result for that module and allows the user to complete it again.

Figure 19: Reset module progress option

4.6. Resetting All Progress

The user can reset all saved progress. This removes all completed module results from the user account and returns progress to the initial state.

Figure 20: Reset all progress option

5. Troubleshooting

This section describes common problems and simple solutions.

5.1. Progress Is Not Saved

Progress is saved only for logged-in users. If progress is not saved, check whether the user is logged in before completing the quiz.

5.2. User Cannot Access the Progress Page

The progress page requires login. If the user is redirected to the login page, they need to log in first. After logging in, they can open the progress page again.

5.3. Login or Registration Problems

If login or registration does not work, check that the email address and password are entered correctly. Also make sure the device has an active internet connection.

6. Conclusion

This manual described the main functions of the CyberAware application. Users can create an account, browse learning modules, complete scenarios, take quizzes, save progress, view results, unlock badges, and reset progress when needed.
